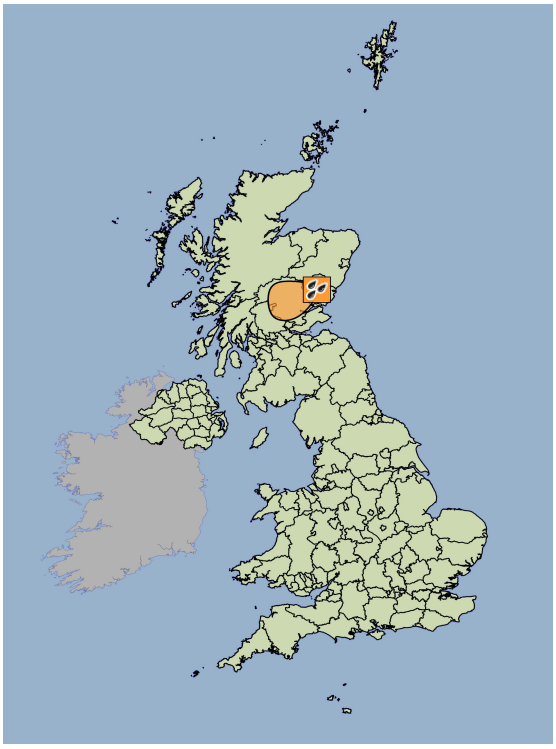
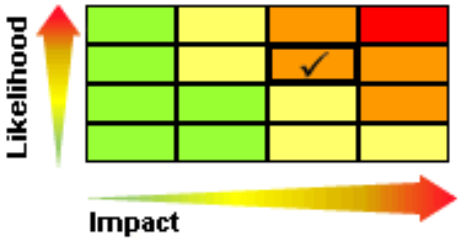
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone remains slow moving across the area bringing persistent rain and increasingly snow to ground above 600 metres.

Overnight and on Tuesday morning much of the area will have a further 20 -25 mm of rain, with as much as 40 mm over some of the high ground - this in addition to the large amounts which have fallen over the previous couple of days. Given the saturated ground, there is a continued risk of flooding.

The Met Office have issued an **Amber Warning** of **Rain**

Valid from **00:05 on Tue, 05th Jan 2016** until **12:00 on Tue, 05th Jan 2016**

Rain will persist overnight and into Tuesday, still quite heavy at times and turning increasingly to snow above 600 metres. The persistence of the rainfall will continue to produce some large totals over areas where ground remains saturated.

This warning is an update to highlight the continued likelihood of medium impacts, primarily due to surface water flooding, which will persist through and beyond the return-to-work peak travel period on Tuesday.

Be prepared for further disruption, particularly to transport.
